1. 关于SIAM 出版社

SIAM (Society for Industry and Applied Mathematics)

- 工业和应用数学学会 (SIAM) 于二十世纪五十年代前期在美国成立，是一个以促进**应用和计算数学**的研究、发展、应用为目的的协会。
- SIAM拥有14,000+个人会员，由来自世界各国的应用和计算数学家、计算机科学家、工程师、统计学家和数学教育者组成。
- SIAM拥有500多个机构会员，由大学，公司和研究机构组成。
- SIAM以出版高水准和颇具声誉的期刊而自豪。是公认的数学专业领域里最可靠的知识来源。

The screenshot shows the SIAM website interface. At the top, there is a dark blue header with the SIAM logo and 'Society for Industrial and Applied Mathematics'. A search bar is present with a dropdown menu set to 'ANYWHERE'. To the right of the search bar are 'Advanced Search', a shopping cart icon, and 'Register' and 'Sign In' buttons. Below the header is a teal navigation bar with links for 'Journals', 'E-books', 'Proceedings', 'For Authors', and 'For Librarians'. The main content area is divided into three columns: 'Journals', 'Books', and 'Proceedings'. Below these are sections for 'LATEST ARTICLES', 'LATEST E-BOOKS', and 'LATEST PROCEEDINGS'. The 'LATEST ARTICLES' section lists two articles: 'Tensor-Based Numerical Method for Stochastic Homogenization' and 'Understanding Popular Matchings via Stable Matchings'. The 'LATEST E-BOOKS' section lists two articles: 'Input-Tailored System-Theoretic Model Order Reduction for Quadratic-Bilinear Systems' and 'The Complexity of General-Valued Constraint Satisfaction Problems Seen from the Other Side'. The 'LATEST PROCEEDINGS' section is currently empty. On the right side, there is a 'SIAM Textbooks' section with a logo and a brief description of the textbooks available.

Upscaling Errors in Heterogeneous Multiscale Methods for the Landau–Lifshitz Equation

Lena Leitenmaier, Olof Runborg

Abstract

In this paper, we consider several possible ways to set up Heterogeneous Multiscale Methods for the Landau–Lifshitz equation with a highly oscillatory diffusion coefficient, which can be seen as a means to modeling rapidly varying ferromagnetic materials. We then prove estimates for the errors introduced when approximating the relevant quantity in each of the models given a periodic problem, using averaging in time and space of the solution to a corresponding micro problem. In our setup, the Landau–Lifshitz equation with a highly oscillatory coefficient is chosen as the micro problem for all models. We then show that the averaging errors only depend on ϵ and the size of the microscopic oscillations, as well as the size of the averaging domain in time and space and the choice of averaging kernels.

Tensor Decompositions and Applications

This survey provides an overview of higher-order tensor decompositions, their applications, and available software. A tensor is a multidimensional or N -way array. Decompositions of higher-order tensors (i.e., N -way arrays with $N \geq 3$) have applications in psycho-metrics, chemometrics, signal processing, numerical linear algebra, computer vision, numerical analysis, data mining, neuroscience, graph analysis, and elsewhere. Two particular tensor decompositions can be considered to be higher-order extensions of the matrix singular value decomposition: CANDECOMP/PARAFAC (CP) decomposes a tensor as a sum of rank-one tensors, and the Tucker decomposition is a higher-order form of principal component analysis. There are many other tensor decompositions, including INDSCAL, PARAFAC2, CANDELINC, DEDICOM, and PARATUCK2 as well as nonnegative variants of all of the above. The N -way Toolbox, Tensor Toolbox, and Multilinear Engine are examples of software packages for working with tensors.
