Open Access Portfolio

Nephrology

A comprehensive range of topics covered by leading scientists characterizes the portfolio in Nephrology. *Nephron*, the first journal worldwide solely dedicated to nephrology, is managed by Ariela Benigni supported by Chih-Wei Yang as Section Editor of "Second Opinion".

George Bakris, a pioneer in hypertension and kidney disease research, is Editor-in-Chief of the *American Journal of Nephrology*. Since 2007 Claudio Ronco has been Editor-in-Chief of the journal *Blood Purification* as well as series editor of the book series *Contributions to Nephrology*, which prominently features dialysis titles.

Our international Open Access journal of renal and cardiovascular research *Kidney and Blood Pressure Research* is managed by Giovambattista Capasso as Editor-in-Chief. Founded in 2013 and managed by Zhi-Hong Liu, the Open Access journal *Kidney Diseases* supports the research exchange between East and West, the Open Access Journal *Cardiorenal Medicine* provides an interdisciplinary platform for the advancement of research and clinical practice, focussing on translational issues. And finally, *Glomerular Diseases* with Sharon Adler as Editor-in-Chief and Cynthia Nast as Deputy Editor is focused exclusively on the glomerulus and is the latest addition to our Nephrology Program.

 Standard View  Download  Share  Tools

Abstract

Background: Anemia is a common complication of chronic kidney disease. The hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) is a new class of oral drugs for the treatment of renal anemia. **Summary:** Clinical trials have consistently shown that HIF-PHIs can effectively increase hemoglobin in both the dialysis population and the nondialysis population. The effects of HIF-PHIs in treating renal anemia include promoting endogenous erythropoietin production and facilitating iron mobilization. Several studies suggest that the erythropoiesis effect of roxadustat is less affected by inflammation. Careful monitoring of thromboembolic events and tumor before and during HIF-PHI treatment is necessary. **Key Messages:** HIF-PHIs are effective in correcting renal anemia. The long-term safety of HIF-PHIs needs to be further studied.

Keywords: Hypoxia-inducible factor, Chronic kidney disease, Anemia, Iron

Book Details

Cosmeceuticals are ingredients or products that provide cosmetic and therapeutic benefits and which can be obtained without a prescription. They are one of the fastest growing segments in the personal care product market. Even in the worst economic climate, sales of cosmetics remain robust. Beauty enhancers are our best means of feel-good escapism, and we are not about to give them up. The ingredients, sales locations, and the regulation of sales are dynamic aspects of the industry. Here we give you a heads-up on where the market is going so you can make strategic decisions for your practice. This book will give you an understanding of facial cosmeceuticals examining the needs of the face, moisturizer formulation, noninvasive testing, and clinical evaluation to establish efficacy. It sheds light on topics such as the delivery mechanisms of active ingredients, vitamin A and C and other antioxidants, growth factors and stem cells, peptides, or amino acids. Topics also include the use of cosmeceuticals for the treatment of acne, rosacea, and hair loss and for hair care as well as the treatment of scars and cosmeceuticals for sun protection and protection from pollution. It also covers aspects of nutraceuticals and diets for healthy skin.
